

System Improvement Suggestions

1. Icon of the show password on login without designated image so it is unclear what it is
2. SECURITY: password complexity is not answering to modern requirements. Normally schema is 8 characters long, minimum one uppercase, minimum one symbol. It is a good taste give to customer opportunity for alternative, like biometric login
3. After logging in there is no option to know which user is logged in, it will be a good thing to add icon or logged in username
4. Parking fee information should be on dashboard
5. In case there is multiple tariffs legend should be displayed
6. Slot schema check should be added (same as with license plates)
7. Vehicle type should not be only "standard" because there is not point in type if there is only one
8. Stopping parking does not trigger confirmation which is recipe for mistakes
9. Clicking for the image should trigger prompt: upload image from memory or in case there is camera on the device use camera natively from the application
10. Uploaded images should be compressed to save storage but at the same time quality should be acceptable
11. User authority level should be added
12. Deleting users should trigger confirmation
13. Payment options should be added
14. Logout should trigger confirmation
